

ENTRUST

Identity as a Service

One Platform for All

From desktop login and single sign-on to privileged access, the Entrust Identity as a Service cloud authentication solution enables existing and future use cases for all users — including employees, partners, contractors and customers. Doing it all with one platform saves time and money.

Features	Standard Workforce Edition Multi-factor authentication for a variety of remote access applications, single sign-on and out-of-the-box Microsoft Active Directory integration.	Plus Workforce Edition Adaptive authentication, complete access control and advanced management fully integrated with Microsoft Active Directory and Azure Active Directory.	Premium Workforce Edition Easily deployed mobile digital identities, and adaptive authentication, proximity-based login and cross-platform biometrics for frictionless access to your resources.
