DataCore presents a three-day, SANsymphony-V Administration course. This course is designed to provide SAN storage administrators, partners and system builders with the tools, knowledge and practical experience to successfully plan, implement and manage a SAN environment in which DataCore software is used for storage management, virtualization and high availability.

Course Length

3 Days

Audience

SAN administrators or system administrators responsible for planning, installation, and management of a DataCore SANsymphony-V solution.

Prerequisites

Knowledge of Windows 2012 from a system administration perspective. Familiarity with SAN and storage systems.

Objectives

At the end of this training, the student will be able to:

- Describe the DataCore SANsymphony-V product offerings
- Discuss High Availability considerations in a SAN environment
- Identify components of a SAN installation
- Develop an installation plan for a SAN environment
- Configure a SAN with DataCore Servers, disk arrays and Hosts
- Test the SAN and monitor SAN traffic
- Deploy the SAN and Software in accordance with current Best Practices
- Research the DataCore Support Database to access current product information and resolve problems

Methodology & Media

Modules

The course modules are each delivered in two parts:

- Lecture
- Hands-on Workshops

Delivery is via a combination of instructor led lecture and hands-on workshops. The workshops provide each student with server access to a SAN.

Each student will use SANsymphony-V to virtualize storage, allocate storage to a Host, implement high availability configurations and manage the SAN environment.
